

Table of Contents

Preface	ix
Chapter 1 Overview of Compilers and Language Translation.....	1
1.1 The Role of Programming Languages.....	1
1.2 Translators and Compilers	1
1.3 Tombstone Diagrams	4
1.4 Bootstrapping a Compiler.....	8
1.5 Interpreters.....	10
1.6 The Compiler Project.....	11
1.7 Essential Terms and Concepts.....	14
1.8 Exercises	14
Chapter 2 Structure of a Compiler.....	17
2.1 Scanner.....	18
2.2 Parser	19
2.3 Constraint Analyzer	19
2.4 Code Generator	20
2.5 Optimizer.....	20
2.6 Final Code Generator.....	21
2.7 Tables and Maps.....	22
2.8 Error Handler	22
2.9 Passes	23
2.10 Compiler Design Goals	24
2.11 Essential Terms and Concepts.....	25
2.12 Exercises	25
Chapter 3 Context-Free Grammars.....	27
3.1 Specifying a Programming Language.....	27
3.2 Context-Free Grammars	28
3.3 Alternate Rule Notations	36
3.4 Grammar Transformations	38
3.5 Derivations and Parse Trees.....	40
3.6 Abstract Syntax Trees	44
3.7 A Context-Free Grammar for Context-Free Grammars.....	45
3.8 Essential Terms and Concepts.....	46
3.9 Exercises	47

Chapter 4 The Programming Language CPRL	51
4.1 General Lexical Considerations.....	51
4.2 Declarations, Statements, and Expressions	52
4.3 Types	53
4.4 Statements.....	58
4.5 Programs	60
4.6 Subprograms	60
4.7 Essential Terms and Concepts.....	65
4.8 Exercises	65
Chapter 5 Lexical Analysis (a.k.a. Scanning)	69
5.1 Class Position	69
5.2 Class Source	69
5.3 Class Symbol	71
5.4 Class Token	72
5.5 Class CharUtil	73
5.6 Class ErrorHandler.....	73
5.7 Class BoundedBuffer.....	74
5.8 Class Scanner	75
5.9 Handling Lexical Errors	82
5.10 Testing Class Scanner.....	85
5.11 Essential Terms and Concepts.....	87
5.12 Exercises	87
Chapter 6 Syntax Analysis (a.k.a. Parsing).....	89
6.1 Example: Implementing Method <code>parseLoopStmt()</code>	90
6.2 Recursive Descent Parsing	94
6.3 First and Follow Sets.....	99
6.4 LL(k) Grammars and Recursive Descent Parsing.....	106
6.5 Variables versus Variable Expressions	108
6.6 Handling Grammar Limitations	109
6.7 Scope and Visibility	112
6.8 Class IdTable	115
6.9 Parsing Variables and Variable Expressions	121
6.10 Class Parser	123
6.11 Essential Terms and Concepts.....	124
6.12 Exercises	124

Chapter 7 Error Handling/Recovery	127
7.1 Types of Compilation Errors	127
7.2 Handling Errors	129
7.3 Error Recovery	130
7.4 Additional Error Recovery Strategies	136
7.5 Essential Terms and Concepts	137
7.6 Exercises	137
Chapter 8 Abstract Syntax Trees	139
8.1 Overview of Abstract Syntax Trees	139
8.2 Structure of Abstract Syntax Trees	143
8.3 Extending Scopes with References to Declarations	145
8.4 Types and Declarations	150
8.5 Structural References versus Nonstructural References	153
8.6 Determining Types of Variables and Expressions	155
8.7 Maintaining Context During Parsing	158
8.8 Declarations, Statements, and Expressions Revisited	160
8.9 Essential Terms and Concepts	161
8.10 Exercises	161
Chapter 9 Constraint Analysis	163
9.1 Overview of Constraint Analysis	163
9.2 Constraint Rules for CPRL/ $\emptyset$	168
9.3 Examples of Constraint Analysis	171
9.4 Essential Terms and Concepts	174
9.5 Exercises	174
Chapter 10 The CPRL Virtual Machine	177
10.1 Overview of the CVM	177
10.2 Brief Comparison with the JVM	179
10.3 CVM Uses Relative Addressing	180
10.4 Loading a Program into Memory	181
10.5 Using the Stack to Hold Temporary Values	184
10.6 Essential Terms and Concepts	191
10.7 Exercises	191
Chapter 11 Code Generation	193
11.1 Overview of Code Generation	193
11.2 Labels and Branching	194
11.3 Load and Store Instructions	198

11.4 Computing Relative Addresses for Variables	200
11.5 Expressions	201
11.6 Statements	207
11.7 Initial Declarations	212
11.8 Disassembler	213
11.9 Essential Terms and Concepts	216
11.10 Exercises	216
Chapter 12 Code Optimization	219
12.1 Overview of Code Optimization	219
12.2 Common Optimizations	222
12.3 Optimization in CPRL	227
12.4 Essential Terms and Concepts	229
12.5 Exercises	230
Chapter 13 Subprograms	233
13.1 Review of Subprograms, Scope, and Parameters	233
13.2 Run-time Organization for Subprograms	237
13.3 Activation Record	239
13.4 Parameters	247
13.5 Subprogram Calls and Returns	248
13.6 Calling Conventions for CPRL on the CVM	250
13.7 Computing Relative Addresses	251
13.8 Implementing Built-in Subprograms	256
13.9 Example of Program Execution	257
13.10 Essential Terms and Concepts	268
13.11 Exercises	268
Chapter 14 Arrays	271
14.1 Using CPRL Arrays	271
14.2 Implementing CPRL Arrays	273
14.3 Essential Terms and Concepts	279
14.4 Exercises	279
Chapter 15 Enumerated Types	281
15.1 Motivation for Enumerated Types	281
15.2 Using CPRL Enumerated Types	282
15.3 Implementing CPRL Enumerated Types	284
15.4 Essential Terms and Concepts	287
15.5 Exercises	287

Chapter 16 Strings.....	289
16.1 Using CPRL Strings	289
16.2 Implementing CPRL Strings	291
16.3 Essential Terms and Concepts.....	297
16.4 Exercises	298
Chapter 17 Records.....	301
17.1 Using CPRL Records	301
17.2 Implementing CPRL Records	305
17.3 Essential Terms and Concepts.....	309
17.4 Exercises	310
Appendix A The Compiler Project	313
Appendix B Additional Project Exercises	323
Appendix C Definition of the Programming Language CPRL.....	327
C.1 Lexical Considerations.....	327
C.2 Types	329
C.3 Constants and Variables.....	332
C.4 Operators and Expressions	334
C.5 Statements	335
C.6 Programs.....	338
C.7 Subprograms.....	339
Appendix D The CPRL Grammar	343
Appendix E Definition of the CPRL Virtual Machine	349
E.1 Specification	349
E.2 Implementation	350
E.3 CVM Instruction Set Architecture	353
Appendix F Searching for Reserved Words	363
F.1 Benchmarking the Search Algorithms	363
F.2 Sequential Search 1.....	365
F.3 Sequential Search 2.....	366
F.4 Binary Search	366
F.5 Search by Length.....	368
F.6 Search by First Character	370
F.7 Gperf Hash Search	371
F.8 Search Using Switch Expression	374
F.9 Search Using HashMap.....	375

Appendix G JIT Compilation versus AOT Compilation.....	377
Annotated Compiler References and Websites.....	385
Index.....	389
